

Belleson Brilliance sounded very smooth without sacrificing detail. Smooth, and quiet. Super quiet...it's a gift to create such a smooth and seductive sound without sacrificing those minute cues that makes us sit up and notice....that places them ahead of most of the pack.

Belleson has been a world leader in high performance voltage regulators since 2010. We recently developed a phono amplifier that, like our voltage regulators, exceeds the performance of established and revered brands. This superb technology is available in our *Brilliance* and *Radiance* Phono Amps with Wifi Hifi™ browser based remote control.

Our products are custom designed and hand built individually in our South Carolina shop. We machine and assemble the chassis, build the surface mount custom Bel amps and optical switches, main PCBs... everything down to the last detail to make a spectacular sounding single or dual stereo input phono stage second to none.

The quietest noise floor you've never heard.

High impedance balanced or single-ended inputs allow moving coil, moving magnet or any phono cartridge. The unique *Wifi Hifi* remote control allows low or high gain selection, and setting resistive and capacitive input loading.

Fully DC coupled for the deepest, cleanest bass. Fully balanced high impedance inputs with high overload margin for the clearest, most transparent treble. Visit our web site for more information!

Hear exactly what's on your vinyl, nothing more or less!
